Abbott Furnace Company

The Abbott S.M.A.R.T System

The Self-Monitoring, Analysis, and Reporting
Technology System

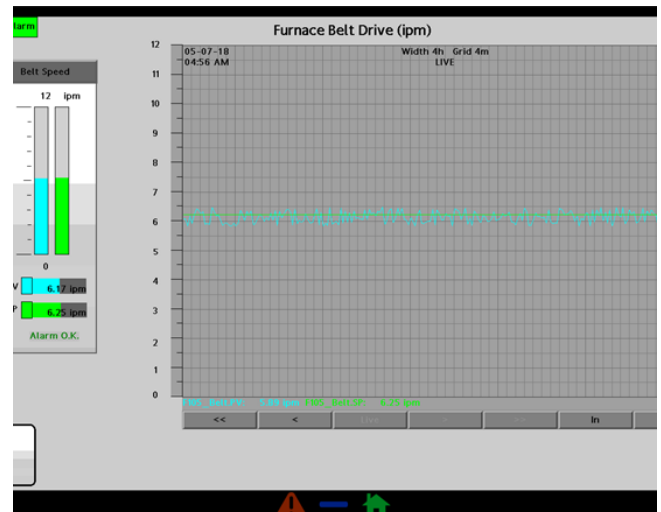

Home of
DREVER
Furnaces

This system will help ease the stringent requirements that come along with heat treat standards like AIAG CQI9, others that require data collection, and monthly or quarterly tests to validate equipment performance. The system is designed to save your team valuable time and money.

The S.M.A.R.T. System collects the required data, sends daily reports for management review, and has the ability to send text messages/emails to maintenance or quality personnel to respond to a potential problem. The S.M.A.R.T. System has the ability to automate the system accuracy test (SAT) and deliver the report via email.

For more information or a demonstration of the S.M.A.R.T. System:

Call Abbott Furnace at 814-781-6355

or visit our website www.abbottfurnace.com

The S.M.A.R.T. System also saves furnace trend data like temperatures, belt speed, fan speed, and any other relevant data the customer wants to trend. It also offers programmed reminders for instrument calibration and annual thermal uniformity tests. (TUS)
